Awning Walls - The awning walls are an excellent complement to a quality product. They simply fit to the existing awning and provide shelter from the elements, privacy and insect protection. A variety of combinations are available depending on your requirements, with a choice of canvas walls or ultra fine mesh, or a combination of both. The walls fully enclose the awning including the A-Frame and a draught skirt encloses the side of the Kamper giving a very practical living area.

Boat Rack - The boat rack is constructed of complete lengths of RHS beam and hot dipped galvanised for maximum protection against rust. A finny fits on to the boat rack nicely and is easy to flip over with two gas struts fitted to each support to assist in lifting the rack up and down. An outboard motor bracket is provided on the front frame with a double stainless steel pole carrier as a standard feature with the boat rack.

The Kimberley Kamper allows you to set up camp completely in minutes leaving you free to relax or enjoy other activities.

The kitchen sets up instantly and is ready for action.

Keeping your trailer on the road with heavy-duty suspension, coil springs, and disc brakes.

Tough and reliable the best
